Long-term research programme

Enterprise collaboration technologies and the design of the digital workplace

- Examines sociotechnical change and the **design of digital workplaces**
 - shaping and reshaping of working worlds and the **appropriation and use of information and communication technologies to support distributed collaborative work**
- **Distributed collaborative work** in organisations has significantly increased in both **scale, scope and complexity** (esp. post-COVID19 pandemic)
 - Wider **range of employees involved** (Milasi et al., 2021; Eurofound, 2022)
 - Greater **diversity of working arrangements** (Ferreira et al., 2021; Smite et al., 2023)
 - Increasingly **complex collaboration technology landscape** (Vailshery, 2022, Schubert and Williams 2022)
- Work practices and work processes are being redesigned and reshaped as working arrangements and technologies change

Research challenge: making distributed collaborative work visible (visualisable, analysable and interpretable)

*“The way in which people work is **not always apparent**. Too often, assumptions are made as to **how tasks are performed** rather than unearthing the underlying **work practices**. By making (collaborative) work visible, designers create a more **intimate view** of the **workplace landscape**.”*
(Suchman, 1995)

*“Allow researchers to carefully **follow coordination practices, information flows, situated routines, and other social and organizational phenomena** across a variety of scales.”* (Geiger and Ribes, 2011)

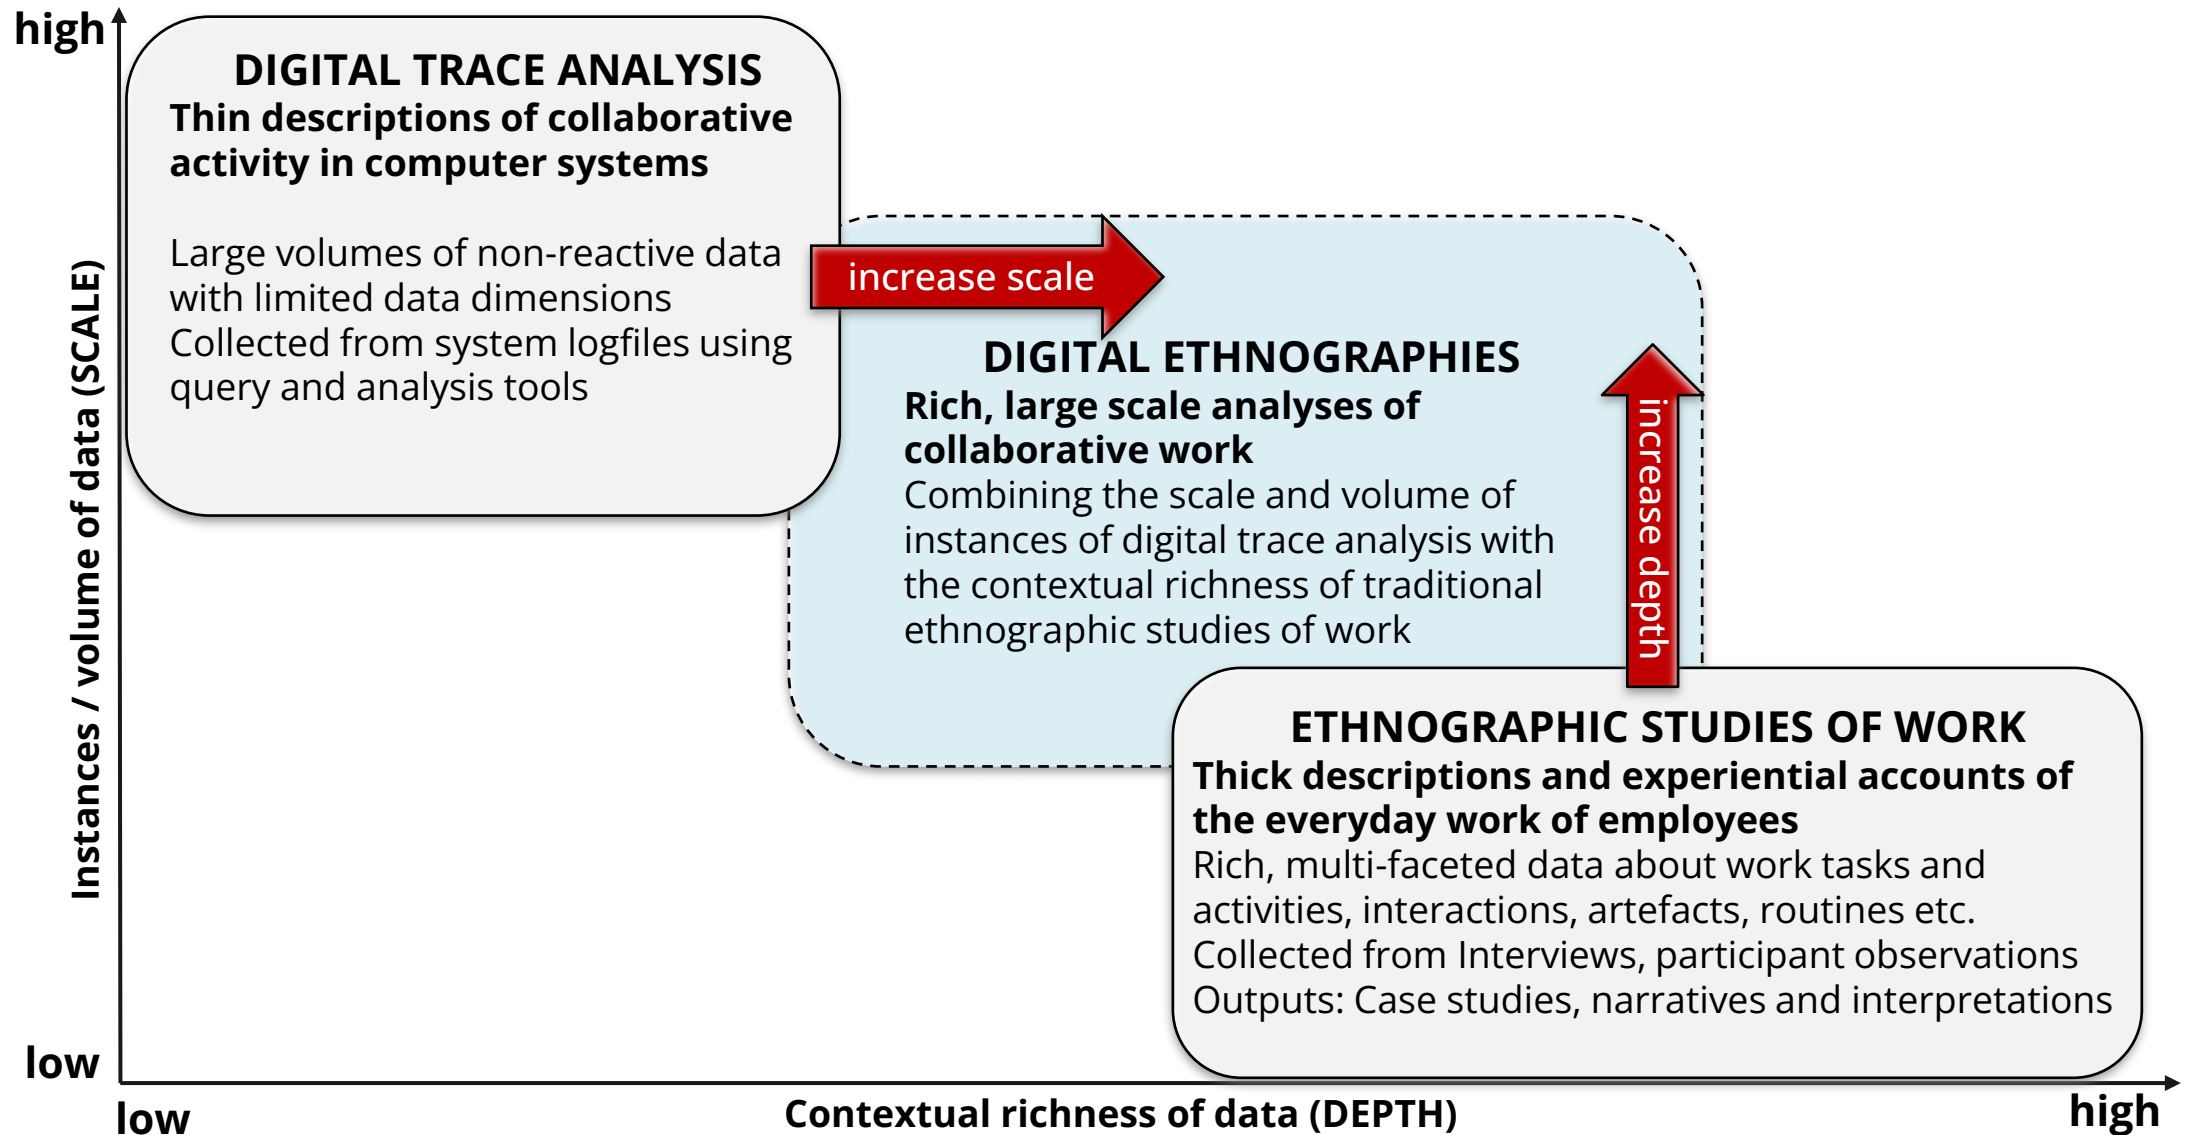

Theoretical and analytical challenge

To traverse between scales and levels (**situated workplace studies → information infrastructures**)
over extended timeframes (**longitudinal view**)

Methodological challenge

To develop research methods that enable us to capture, visualise and analyse collaborative work in-depth and across space and time
To integrate heterogeneous data types representing different dimensions of distributed collaborative working

Data integration: methodological innovation to enable rich, large-scale analyses of collaborative work

Research Study Design

Research Aim

Develop and test a multi-level method for integrating heterogeneous data types to visualise and analyse digital work and workgroup arrangements over extended timeframes

Scope of study

The rhythms and flows of work and the development of work artefacts associated with organising and conducting synchronous team meeting activities over time

Research context

University Research Group

Data Type

Digital Trace Data: Social Documents
(e.g. wiki pages, blog posts, forums ...)
(non-reactive data)

Diary Study Data: Frequency, timing,
locations, participants, synchronicity
of meetings (reactive data)

Data Collection Method

Event log extraction
(ETL)

Diary Study Method

Data Source

Event logs of collaboration systems

Excel sheet (digital diary app in development)

Exploratory Study

Social Documents as “Trace Data”

- **User-generated digital artefacts for collaboration and communication**

- Wiki articles, blog posts, forum discussions, chat messages, shared and commented documents, ...

- **Social, compound and highly networked documents**

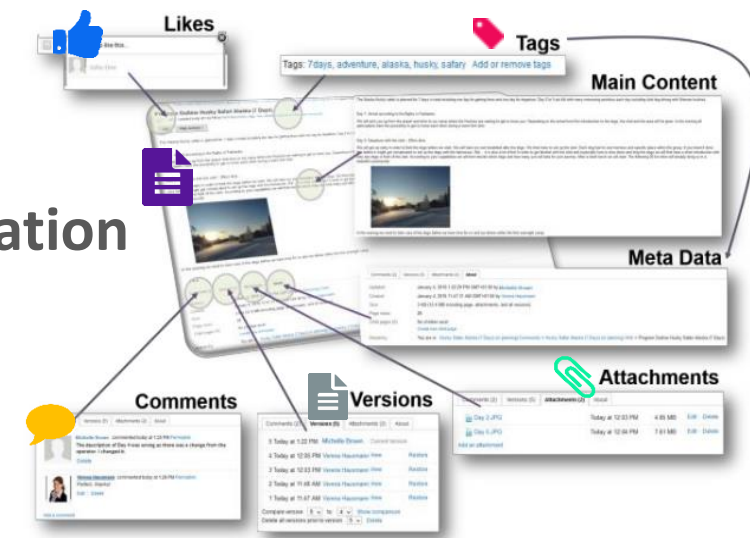

- Social: Enriched and edited by many users over time
- Compound: Versions and histories, comments and attachments, tags, ...
- Networked: References and links to other documents, shared with workgroups and single users

- **Data source for Trace Ethnographic Studies**

- Aims at reconstructing *“patterns and practices of users in distributed sociotechnical systems”* and *“combines the richness of participant-observation with the wealth of data in logs”* (Geiger and Ribes, 2011)

- **General problem of non-reactive data:** not immediately ready for analysis and limited contextual information

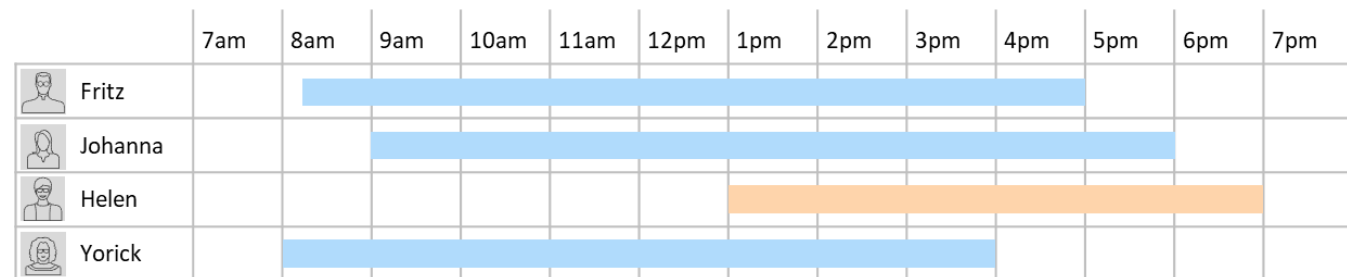

- *“can rarely be accepted as found evidence ready for analysis. Researchers tend to put significant time into preparing trace data before they can dive into a deeper investigation.”* (Østerlund et al., 2020)

Example of a wiki article in HCL Connections (Hausmann and Williams, 2016)

Diary Study Data

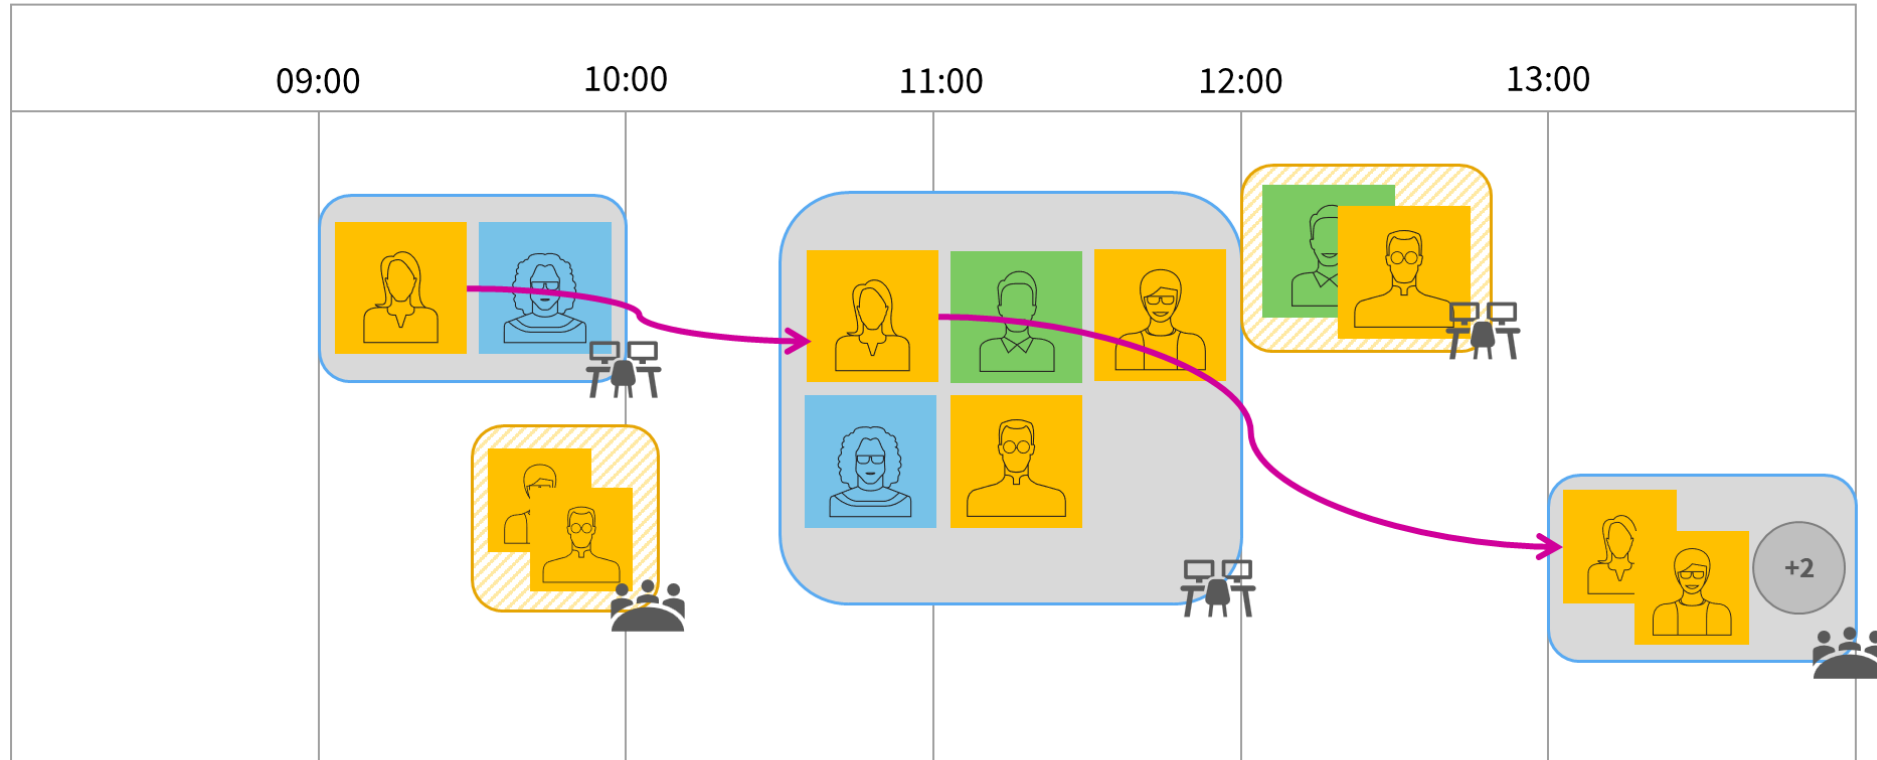

- Diary method for capturing **in-situ contextual** and **longitudinal** details about everyday work and situated practices (Czerwinski et al., 2004; Jarrahi et al., 2021)
 - Time diary as research tool for investigating patterns and behaviours over a defined period of time (Bartlett & Milligan, 2015)
 - Minimized recall bias (Hyers, 2018; Jarrahi et al., 2021)
- Our ongoing diary study captures the **daily work location and work times** as well as **synchronous work periods and events** (e.g. meetings)
 - Captured as time diary via Excel spreadsheets
 - One workgroup (ten participants, multiple subgroups)
 - Started mid-April 2023, ongoing → almost one year of data
 - Distributed and hybrid work from an **individual perspective**, but also from a **workgroup level**

Scope of this study

Long-term diary study:

Period of data collection:

Mid-April 2023 – today

Participants:

1 workgroup, multiple subgroups, 10 participants (university research group)

Location entries: > 1830 entries

Meeting entries: > 2097 meeting entries, 1209 distinct meetings (as at end of January 2024)

Data selected for this study:

Period of data collection: (290 days)

Mid-April 2023 – January 2024

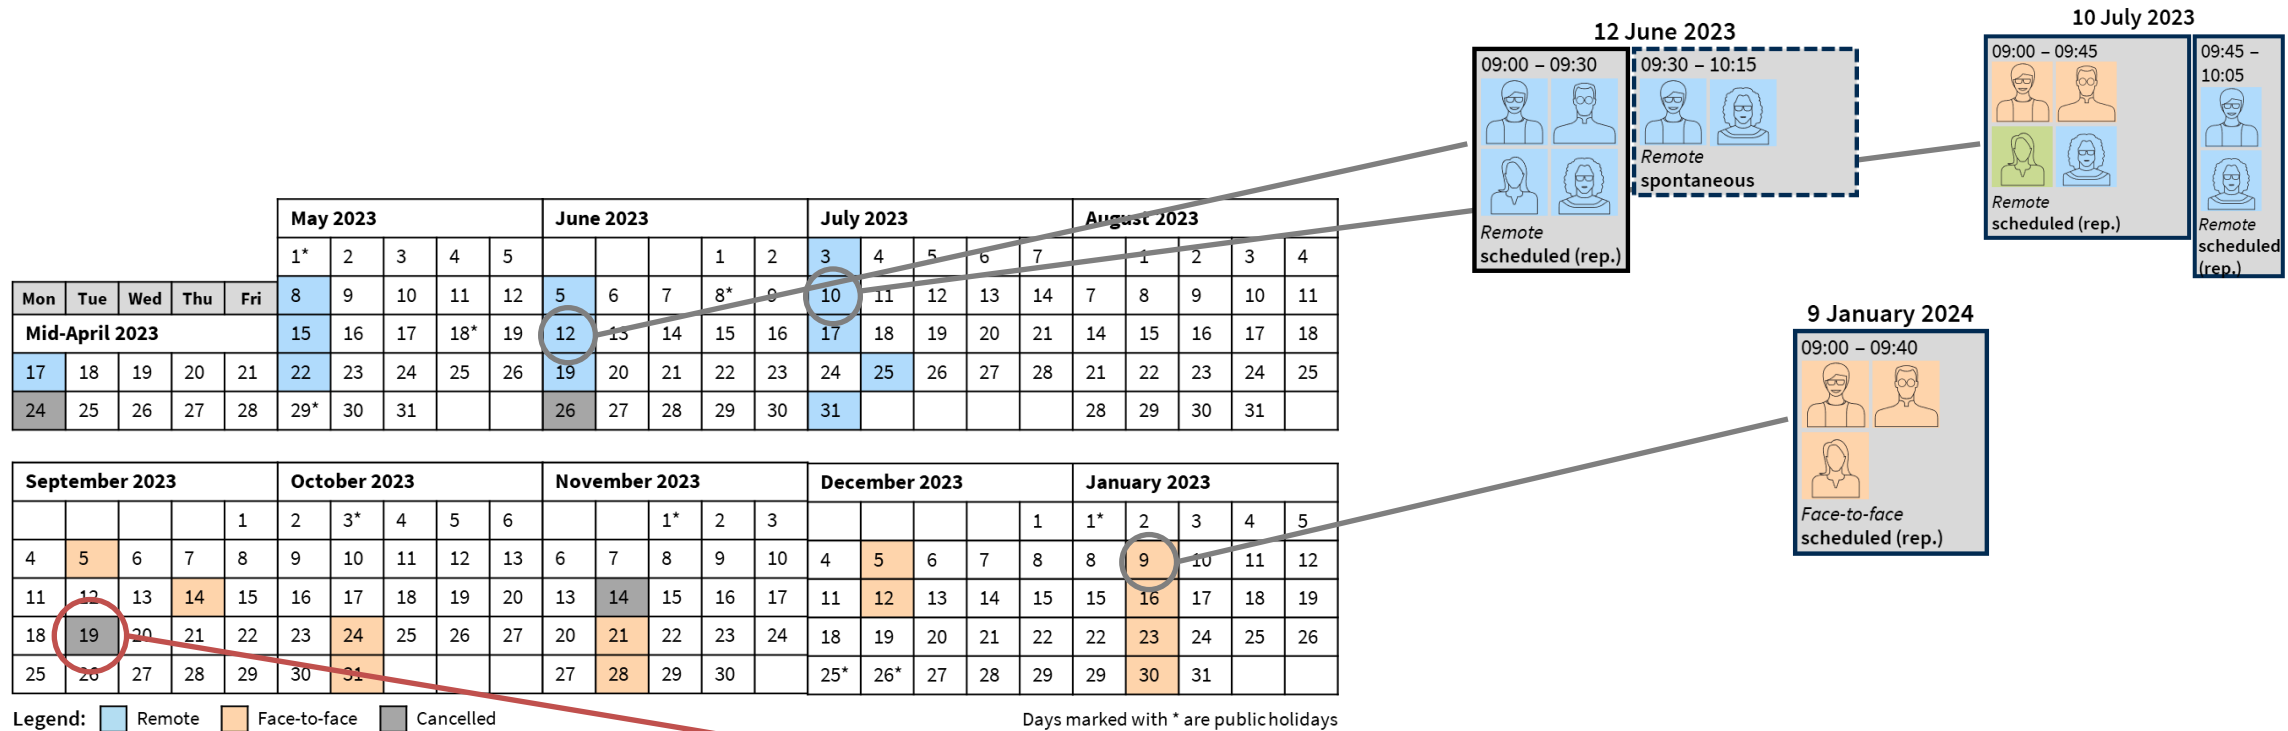

Participants:

1 subgroup with four members

Location entries: 863 entries

Meeting entries: 103 meeting entries, 40 distinct meetings

Diary Study Data for the “Regular Team Meeting”

Location data for 19 September 2023

Legend: ■ Homeoffice ■ In office ■ Thirdspace

Patterns

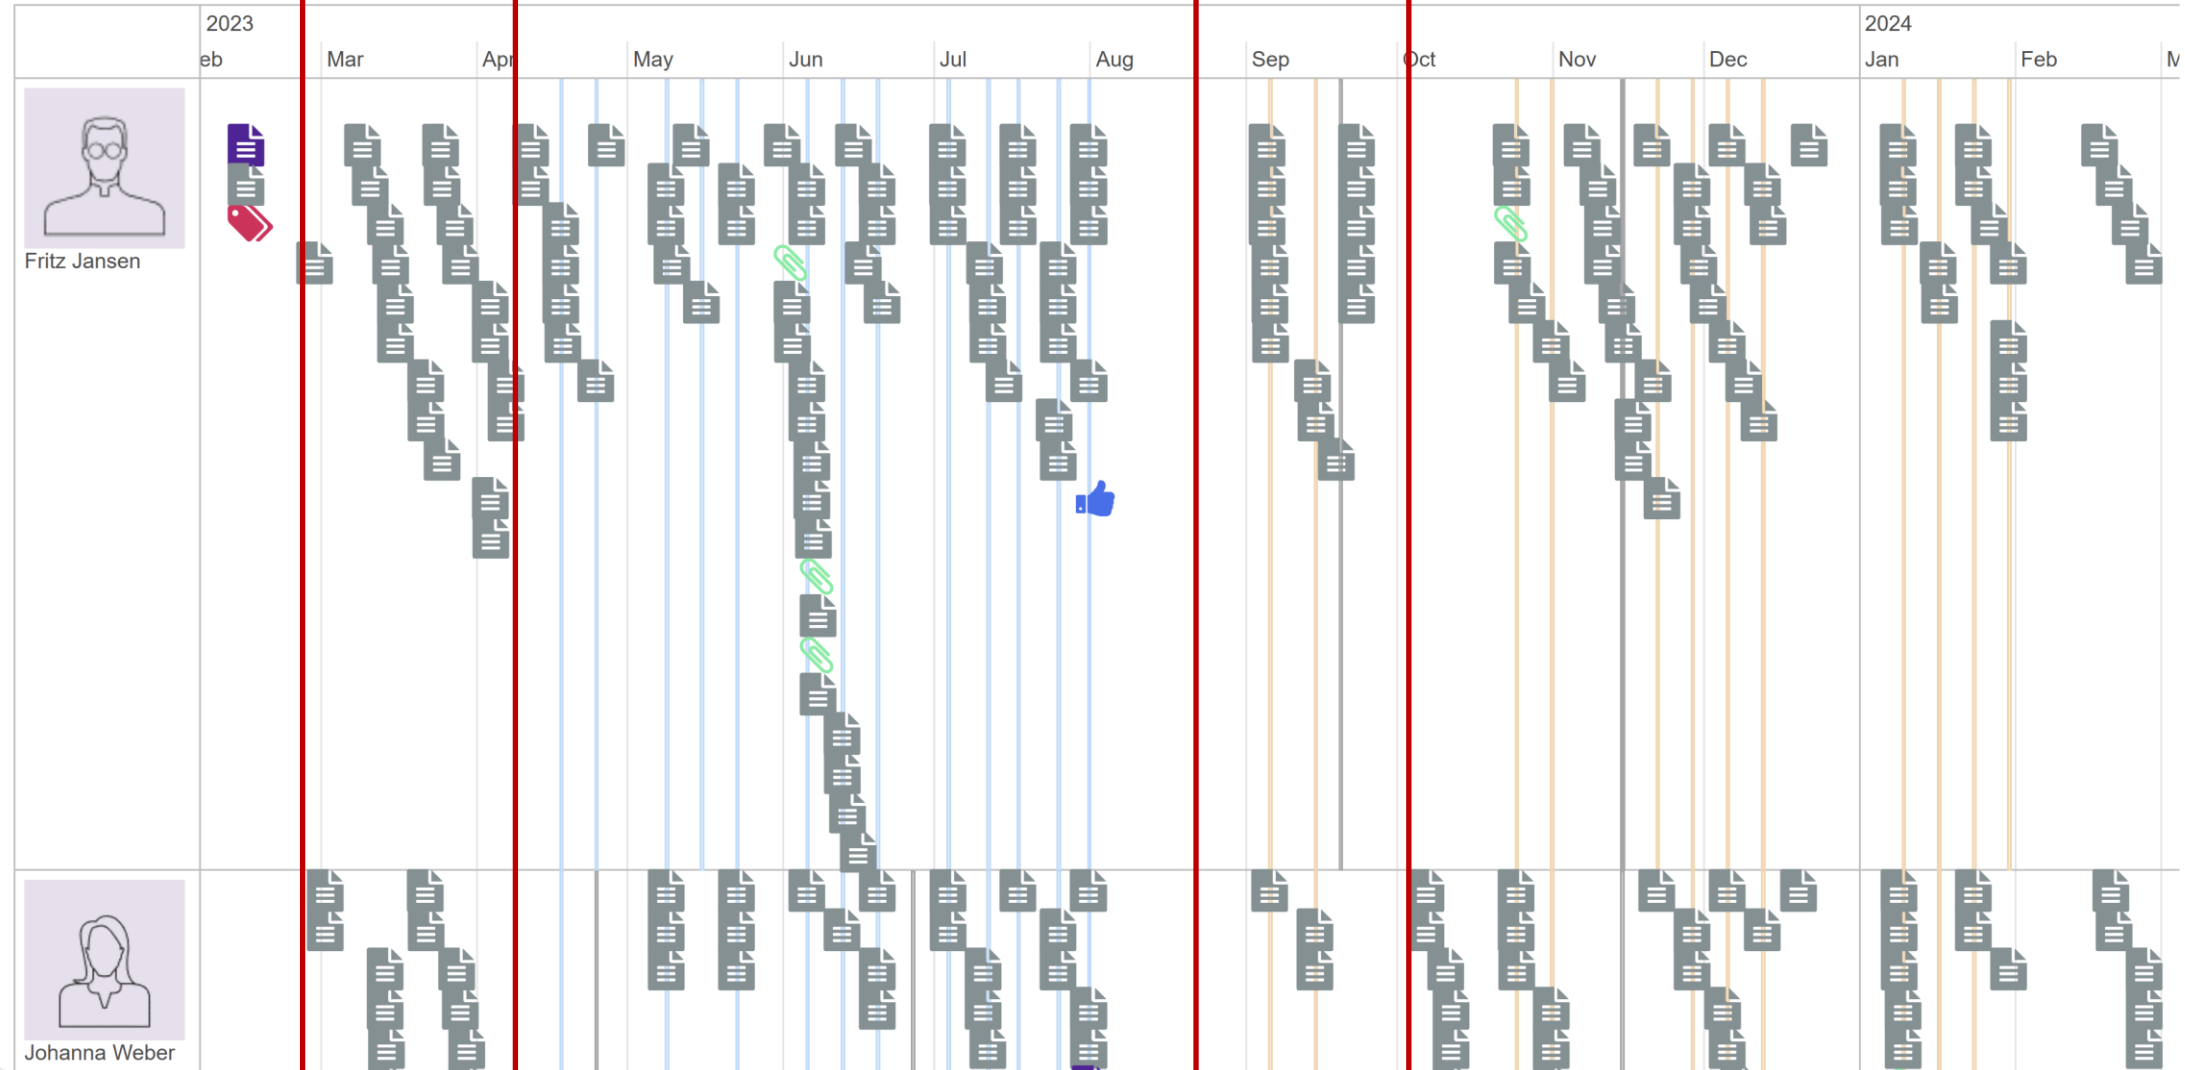

A Trace Ethnography
How a University Researcher

Teaches their Digital workspace for team meetings

Same practice

Patterns

On-premises meetings, research time

Summary and outlook

- Developed and tested a **novel method** that brings **two types of heterogeneous data** together (diary entries & digital trace data) and allows for a **longitudinal** analysis across **different levels of abstraction**
- The method now enables the identification and analysis of ...
 - work locations --> activity-based working
 - patterns and timing of synchronous and asynchronous working --> rhythms and flows, work interruptions,
 - role and importance of documents and work products --> document theory
 - work conducted in preparation for, during and following specific meetings --> articulation work, transitions and handoffs
 - patterns, shifts and changes in work processes and practices --> new roles, routine dynamics
 - longer term begin to understand the processes of standardisation and embeddedness
- Next steps for the method and tool
 - Examine complexity of distributed collaborative work on a larger scale by including
 - further data types, documents and tools
 - extending timeframes
 - improving visualisations, filtering and transitioning between levels
 - longer term development of Content Rich Data Spaces (CoRDS))
